

作業#13

- 假設某人找工作的需求為「**錢多****事少****離家近**，**公司****賺錢****股價高**」，其模糊值設定如右：
- 今有四個工作機會，其事實定義及資料如後
- 某人對於這五個條件的重要性分別為**1.0**, **0.7**, **0.5**, **0.1**, **0.2**，請計算這四個工作機會符合需求的程度

```
(defrule match-pay
  (declare (CF 1.0))
  (job (ID ?id) (pay High))
  =>
  (assert (high-pay ?id)))
```

(declare (CF n)) 規則的CF確定程度n值可以作為滿足此條件的重要程度(權重值)，40000滿足薪水高(high-pay ?id)事實的CF值即為薪水高(High)的符合程度乘以此條件的權重值 = $0.72 * 1.0$

(get-cf ?f1) 可以取得 ?f1 事實的CF值

五個條件的權重加總為 $1 + 0.7 + 0.5 + 0.1 + 0.2 = 2.5$ ，取加權平均值($/2.5$)作為工作機會的符合程度(Degree)

```
FuzzyCLIPS> (run)
Job: 4   Degree: 0.5625600000000001
Job: 3   Degree:
Job: 2   Degree:
Job: 1   Degree:
```

?

```
(deftemplate salary
  0 100000 NTD
  (
    (High (25000 0) (45000 0.9) (60000 1))
  )
)

(deftemplate hours
  0 168 HOUR
  (
    (Low (20 1) (40 0.7) (50 0))
  )
)

(deftemplate distance
  0 300 KM
  (
    (Near (5 1) (20 0.8) (100 0))
  )
)

(deftemplate profit
  0 10000 M
  (
    (High (10 0) (100 1))
  )
)

(deftemplate stock-price
  0 3000 NTD
  (
    (High (10 0) (100 0.8) (500 1))
  )
)
```

(deftemplate job
